

# **LaundryCard™**

## **Digital Video Recording System**

**Integrating a Digital Video Recorder (DVR) system into your LaundryCard™ system offers additional security and efficiency control. With remote access available to monitor your Laundromat in real time and to record the captured video remotely, a Digital Video Recorder system can safeguard your investment and eliminate any question or doubt.**

**DVR systems are available in 4, 9 or 16 camera configurations. Dome and bullet camera styles are available with interior or exterior housings. The cameras can be mixed and matched to maximize your recording and live streaming needs.**

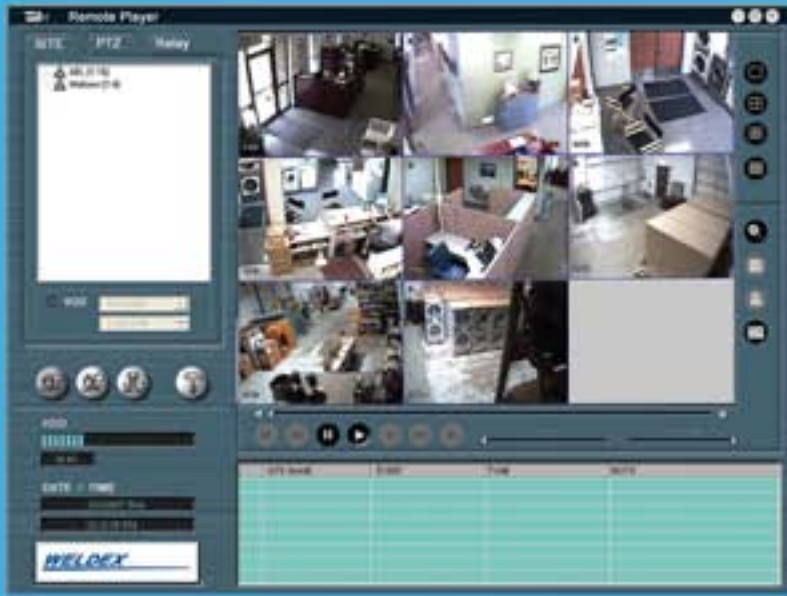

**Most DVR systems are equipped with a 250 gigabyte hard drive which can record up to two weeks of video or even more for a 9 camera system, dependant on the configurations you chose! Additional storage is available with optional external hard drives.**

**With the Local Area Network compatibility, integration with your LaundryCard™ system allows for remote access through your high speed internet or dial up modem. The remote access tools allow you to view live video of what is happening at your Laundromat and even review past events that have been recorded.**

**Not sure if your employees are opening or closing the store at the times you have advertised? With a Digital Video Recorder (DVR), monitoring your store is easier and more efficient. Contractors and technicians schedule specific times to arrive on site, and bill you for specific times. With a DVR system in place, you can go back and check the times your contractors and technicians were on site.**

**Hear rumors of an “after hours party” at your Laundromat? The existence of a DVR system will deter your employees from doing the things they shouldn't be.**

**Search for recorded events at specific times and compare the surveillance video with LaundryCard™ activity such as access to bathroom doors or storage rooms, washing machine overflows, tar covered jeans or flammable rags in a dryer, vending equipment vandalism and countless other events.**

**Cameras are also available with a weather-resistant housing to view the activity in your parking lot. Your customers feel safer knowing you have video surveillance from the time they drive onto your lot, until the time they leave. And you should too, as your liability and risk is being watched over and available for your replay or to hand over to authorities or claims adjusters if such events do occur.**

**Some camera lenses have zoom capabilities to view live streaming video of your water heater gauges, heating and air conditioner controls, change machines and LaundryCard™ X-Changers. You can monitor storage rooms and equipment which are not in view of the attendants while you are away! Even watch your collector empty the bill accepters or just record the entire collection activity.**
