

LaundryCard™

Internet Station

Give your customers something to look forward to on laundry day! By providing an Internet Station, your customers can browse the internet while they wait. Your customers can use their LaundryCard™ as a payment option, which will restrict the use of the Internet Kiosk to your customers.

Built with a design similar to your durable X-Changers and pre-configured with special internet kiosk software, you can feel safe from intentional sabotage of your Internet Station and operating system.

The Internet Station is a wall or surface mountable powder coated steel cabinet and comes complete with an externally mounted powder coated aluminum keyboard with chrome plated zinc keys and stainless steel trackball.

Mounted on the cabinet is the same style card reader as on your laundry machines. Your customers will access the Internet using their LaundryCard™ just as they would to start a washing machine. The dollar amount that you charge is configurable by you and is automatically deducted from the customer's LaundryCard™!

Optimize your customer's experience by offering them an Internet Station. Your customers will appreciate the opportunity to check email, traffic, weather or to just log on to their favorite website! The low-cost, pay as you go system allows your customers to access the Internet Station with their LaundryCard™!

As a Laundromat owner, having a high speed internet connection could have many additional benefits. Some of the added benefits, aside from a revenue producing Internet Station, include the ability to add a credit card payment option to your X-Changers, purchase or add value to a LaundryCard™, faster technical support connections, and easier downloads of customer database and sales information from your own high speed internet connection at your home or office.

The increased payment options will increase your customer loyalty! Your LaundryCard™ system requires a high speed internet connection to connect to a Credit Card Merchant Services provider. By offering the Internet Station in conjunction with the credit card option, your customers will pay for your monthly internet service provider fees!

Interfacing an Internet Station with your LaundryCard™ system will limit it to only customers with an existing LaundryCard™. The programs installed on the Internet Station deactivate the use of undesirable function keys and system critical key combinations as well as disabling access to undesirable websites and downloads. Complete with a rugged powder coated steel keyboard and built-in stainless steel mouse, the Internet Station is installed in a powder coated steel cabinet, similar to your X-Changer, keeping your investment locked up and secure!

Backed by our technical support team, the Internet Station is also covered under a one year hardware warranty and service support agreement. See your local distributor for high speed internet requirements.
