

LaundryCard™

Multi Level Vend

As laundry equipment evolves, equipment manufactures have designed micro-processors to allow variable pricing options. This gives the customer the ability to choose a custom wash cycle and be charged appropriately. Adding the Multi Level Vend Upgrade to your card readers will allow you to take advantage of the advanced features of the equipment and control them from the LaundryCard System.

Hot Water	= \$1.79
Warm Water	= \$1.59
Cold Water	= \$1.19

CCI has taken full advantage of this new breed of 'Intelligent' controllers and have used this technology to make pricing these machines very easy. With just a few key strokes, store-owners can change all of the pricing options on all of the machines in the store without going to each machine. Time of day pricing has also been extended to allow unique price schedules to affect cycle options, giving store-owners ultimate control in flexibility cycle pricing.

The new MLV upgrade is only available on certified equipment types. See your CCI Distributor for more information on which types are supported.

**Centralized configurations will also be available on supported machine types giving store owners the ability to program machine cycles such as; cycle time, temperature, spin time, as well as Dryer temperatures and times.*

With CCI, setting up Multi-Level pricing is simple yet flexible. For every machine there is a 'Base Price' and a number of options that your customer can choose. From the Equipment Setup Screen, Store Owners can set 'Upgrade' pricing for these options. For example; the base price of a machine could be \$1.25, but if the customer chooses a 'Hot' wash then \$.50 is added to the 'Base Price'. Time Of Day pricing has also been extended to allow the options pricing to be adjusted by day of week and time of day.

Exclusively, CCI introduces Equipment Cycle Setup Options. From any local or remote location Store Owners can View and Modify cycle options. Adjust cycle time, spin time, dryer temperatures, and more with a simple point and click interface. Best of all, equipment setups are downloaded to all corresponding machine types automatically; Setup one Topload Washer and the configuration will be automatically saved and downloaded into all of the stores Toploaders!**

CCI has extended it's report set to include the Multi-Vend Analysis Report. This intuitive report allows Store Owners to see what options their customers have been choosing. This information can be invaluable in helping determine an optimal pricing structure for the store.

The data is downloadable and can be saved and imported into any spread sheet application for further analysis.

** Equipment cycle setup options is a feature not supported by all manufacturers. Contact your local CCI Distributor for compatibility information.
